

Protect your family's health

The problem

WATER absorbs traces of most substances it touches. With chemicals being used in so many areas of modern life they eventually end up 're-cycled' in our water supplies. Industrial waste, pesticides, fertilizers, effluent, etc. are continually loading up our environment and waterways. By necessity, further chemicals are added to our drinking water to control bacteria levels and reduce health risks.

Organic substances like chlorine alter the taste and odour of our water; while colour is mostly due to dirt and rust, and sometimes metals.

Purifying water at the point of use, is the only way to ensure safe water. As 99% of household water goes down the drain, the amount of money authorities would need to ensure pure drinking water would be prohibitive.

Most filters improve taste and colour. However, taste alone does not determine water quality, as many substances, including bacteria and viruses, can be tasteless.

The solution

YOU and your family can enjoy safe, clean water in your home with a Crystalline water purifier. You can use as much as you want; it's on tap. Tea, coffee, soups, pasta, never tasted so good.

A water purifier may well be the most important household appliance you ever invested in.

SUBSTANCES OFTEN FOUND IN YOUR WATER:

Ammonia	Chlorides	Phenol
Aluminium	Cysts	Radium
Asbestos	Copper	Sodium
Borates	Chromium	Selenium
Barium	Detergents	Styrene
Blue-green algae	Fluorides	Silver
Bacteria	Hardness	Sulphates,
Bromides	Iron	Trihalomethanes
Cadmium	Lead	VOC's
Chlorine	Lindane	Viruses
Chromates	Manganese	Zinc
Cyanide	Mercury	and more...
Chlordane	Nitrates/Nitrites	
Chloroform	Nickel	
	PCB's	

Crystalline
water purifiers

Water King

These point-of-use filters provide first-class, safe drinking water with improved taste and removal of impurities.

TWIN UNDER-SINK FILTER

- Allows you to choose the water quality you require.
- Widely available inexpensive filter cartridges are used which are fully interchangeable.
- A large selection of filter types allows you to change your water quality as your needs or concerns change.
- Water King is available as a portable unit or plumbed in under the sink.
- Made in Australia, Water King filter housings have been tested by CSIRO and meet standard MP52.
- Most of our filter cartridges are also Australian made and tested. Those that are not meet the NSF standards.
- Water King filters are supplied complete with faucet, cartridge spanner and tubing.

FILTER TYPES

Filtrix DuoFlow Membrane Cartridges

Combines activated carbon and capillary microfiltration membranes for excellent performance on bacteria, chemical reduction as well as taste and odour improvement. The service life can be up to 5000 litres of tap water. FailSafe protection cuts off the water flow at the end of the filter's life, ensuring you don't drink unfiltered water.

Deioniser

Uses a combination of resin and carbon to reduce the TDS, remove chemicals such as fluoride and chlorine as well as heavy metals. It also improves taste and odour. Depending on your water quality, it can have a service life of approximately 6 months.

KDF

Comprises of a combination of patented KDF material and carbon to give an exceptional long service life. It will remove dirt, chlorine and other organic chemicals improving taste and odour. It will also remove bacteria and most heavy metals.

Carbon

This is the most common type of filter. It is excellent for improving taste and odour.

Ceramic

The ceramic filter filters out harmful bacteria like Giardia, Cryptosporidium, eColi as well as dirt, rust and sediment. It is usually used in conjunction with a deioniser or carbon cartridge. This is a cleanable, re-usable cartridge.

Sediment Filters

Removes undissolved particles (dirt, rust, etc.). Sediment filters which are rated at 1 micron or less will also remove harmful bacteria like Giardia and Cryptosporidium. As a prefilter it helps to extend the life of the other filters in the system.

REVERSE OSMOSIS WATER PURIFIERS:

Remove the contaminants you can taste as well as those you can't.
Fresh clean water on tap for you and your family.

Sierra Reverse Osmosis

- Provides high quality water by removing a wide range of contaminants like chlorine, fluoride, heavy metals, bacteria and viruses.
- Cartridge replacement is simple with quick connect colour coded cartridges.
- Sierra filters are made in the USA and are certified to NSF standard 58 assuring you of the highest quality.
- Long life filters help minimise cartridge replacements.

Osmonic 5 – 190 Reverse Osmosis

- Osmonic 5-190 is a budget-priced 5-stage reverse osmosis system.
- Provides high quality water by removing a wide range of contaminants like chlorine, fluoride, heavy metals, bacteria and viruses.
- Available as a portable unit or plumbed in under the sink.
- Widely available inexpensive off the shelf filter cartridges are used which help reduce running costs.

Watermaker Five

- The WaterMaker Five is a compact reverse osmosis system which features a four-stage prefilter, membrane and postfilter housed in a single cartridge. The fifth stage, an in-line carbon filter, is placed between tank and faucet.
- The WaterMaker Five uses the latest in system design and membrane technology to give you more water. This system delivers a 30% faster water flow from the faucet and a faster tank refill compared to a typical RO system.
- Yearly maintenance is quick and easy. Simply remove the cover and replace one cartridge.
- The WaterMaker Five is much smaller and lighter than the typical reverse osmosis system.

PORTABLE WATER PURIFIERS:

Watermaker Mini Portable Reverse Osmosis Filter

- The WaterMaker Mini produces high quality water by removing up to 93% of all dissolved solids.
- Removes 99.97% of Cryptosporidium and Giardia.
- Improves the taste and odour by removing chlorine.
- Simple to use tap-mounted reverse osmosis system. No permanent plumbing connection required making it extremely versatile and portable.
- The WaterMaker Mini will produce up to 32 litres of fresh water every day.
- The WaterMaker Mini is made in the USA and is certified to NSF standard 58 assuring you of the highest quality.

Ever Top Bench Top Reverse Osmosis Purifier

- Provides high quality water by removing a wide range of chemicals such as chlorine and fluoride, as well as many heavy metals, bacteria and viruses.
- The new Ever Top purifier provides the same automatic operation previously found only in plumbed under-sink reverse osmosis systems.
- The Ever Top has a self-filling bottle, with automatic stop/start to ensure you will always have first class drinking water.
- The Ever Top automatically tops up as water is consumed from the bottle.
- An LED display keeps you up to date with the status of the purifier.
- Fully disposable filter cartridges are quick and easy to replace.

Shower filter

- Removes chlorine, which is a common cause of skin problems and other allergies.
- Removes other organic chemicals e.g. pesticides, detergents, dissolved heavy metals like lead, iron, aluminium, copper as well as dirt and rust.
- Very easy to install. The Shower Filter fits all typical standard half inch (12 mm) threads.
- The shower filter uses a long-life anti bacterial KDF filter media which ensures a long service life.
- Available in white or chrome.
